

USER GUIDE

VERY IMPORTANT!
Installation is Best Done at
Night or Early Morning While Bees
are in Hive, Unless Robbing
is taking place, then install
without delay!

Installation with Ultimate IPM Bottom Board™

- Installation is best done at night or early morning while bees are in hive, unless robbing is taking place, then install without delay.
- Pull out **Push Pins** from top. Save or discard protective foam.
- Place **Ultimate Universal Robbing Screen** on landing board, making sure that the alignment pins on bottom engage the holes in **Ultimate IPM Bottom Board**.
- Install single **Push Pin** in hole on top flange to attach.
- Install optional **Push Pins** on side flanges for stronger attachment.
- Installation is the same for 10-frame and 8-frame hives.

Installation with Conventional Bottom Boards

- **10-FRAME HIVES**
- Installation is best done at night or early morning while bees are in hive, unless robbing is taking place, then install without delay.

- Pull out **Push Pins** from top. Save or discard protective foam.
- Place **Ultimate Universal Robbing Screen** on landing board, the pins on the bottom act as a lower vent that is bee proof.
- Install **Push Pins** in the center hole on top and on each side flange to attach.
- **8-FRAME HIVES**
- Installation is best done at night or early morning while bees are in hive, unless robbing is taking place, then install without delay.
- Pull out **Push Pins** from top. Save or discard protective foam.
- Using the edge of a hive tool or knife score the V-grooves in the side wings and break off.
- Place **Ultimate Universal Robbing Screen** on landing board, the pins on the bottom act as a lower vent that is bee proof.
- Install **Push Pins** in the center hole on top and on each side flange to attach.

Using the Ultimate Universal IPM Robbing Screen™

- Installation is best done at night or early morning while bees are in hive, unless robbing is taking place, then install without delay.
- Open 1 of the swinging doors, lifting gently, and rotate to the full open position.
- If robbers find their way in switch to the other door at night.
- **SPRING:** It is best to install your **Robbing Screen** early

in the season when starting Spring feeding and then remove once nectar flow starts.

- **SUMMER:** It is best to install your **Robbing Screen** after the nectar flow stops or if you have taken honey and keep it on until Fall feeding is completed.
- **FALL:** Leave **Robbing Screen** on until late fall and then install mouse guard.
